GASGEN

Better Than Bottled

Description

In many of today's cellar systems bottled gases of multiple elements and mix ratios are the more common supply of choice, however the use of bottled gas can be potentially hazardous in terms of onsite storage as well as the high cost for renting a multitude of bottles. Furthermore, with the current headlines relating to the harm of green-house gases on the environment as well as the shortage of CO₂ it is becoming more evident that a new solution is needed.

A Nitrogen Gas Generator is the heart to the ultimate gas dispensing solution. Apex aims to provide a system which supplies the high quality, reliable mixed gas that your need for faster beer dispensing, reduced fobbing, and consistent pint presentation.

Apex's GasgeN2 moves further beyond the reliance of CO₂ to putting Nitrogen at the centre of your system. An onsite nitrogen generator produces nitrogen which can either be used in your cellar pumps or mixed in with carbon dioxide on-site to provide whatever gas ratios your beers require.

Features

Food & Beverage Grade Gas Mixer
Plug & Play System
Medical Grade Filters and Tubing
Easy Installation
Simple & Low-Cost Maintenance

Benefits

Fewer Bottles: Our system replaces the need to buy and rent a variety of mixed gas bottles, by mixing them onsite we are able to produce the same ratios from only bottled CO₂. Meaning fewer bottles, saving you money and space.

Unlimited Nitrogen: GasgeN2 unlike most, puts nitrogen at its heart. We are able to use the nitrogen from the generator to power your pumps and for cleaning the lines. Using pure nitrogen whenever possible to reduce waste and make your expensive CO₂ last longer.

Mixed Gas on Demand: Most premises offer a range of lagers, ales, stouts and more, which require different mixed gas ratios. Mixing onsite provides you with a cost effective method for offering a wider range of beers. You no longer need to buy and rent bottles of expensive mixed gas that you rarely use.

Eco-Friendly: Bottled Gas Suppliers make their money from you buying gas and therefore want you to be using as much as possible, we don't work the same way. Our generators provide you with all the nitrogen you want for the same monthly fee. **We don't profit from your gas usage** meaning, we are actively trying to reduce your systems reliance on CO₂ both because it is beneficial for you and because it is better for the environment.

Make Your Bottled Gas Last Longer

Generating nitrogen onsite allows our system to use it whenever CO2 is not required. CO2 is important for the taste and texture of a lot of beers and therefore little can be changed about the mixed gas currently used in your system. But where you previously used CO2 or mixed gas in powering beer pumps or in cleaning lines, our system can use the generated nitrogen, saving bottled gas to be used in beers only. This makes your bottled gas last longer and means you need fewer bottles in your cellar, saving on rental costs.

Don't worry about gas quality, the nitrogen is produced by a generator using medical grade filters and tubing. The generator is tested to produce high purity nitrogen so you can be rest assured the nitrogen produced is the best there is. To ensure your system is running at its best we will make annual visits to check the generator, change filters and ensure the generator is continuing to produce the high grade nitrogen, its all part of the service.

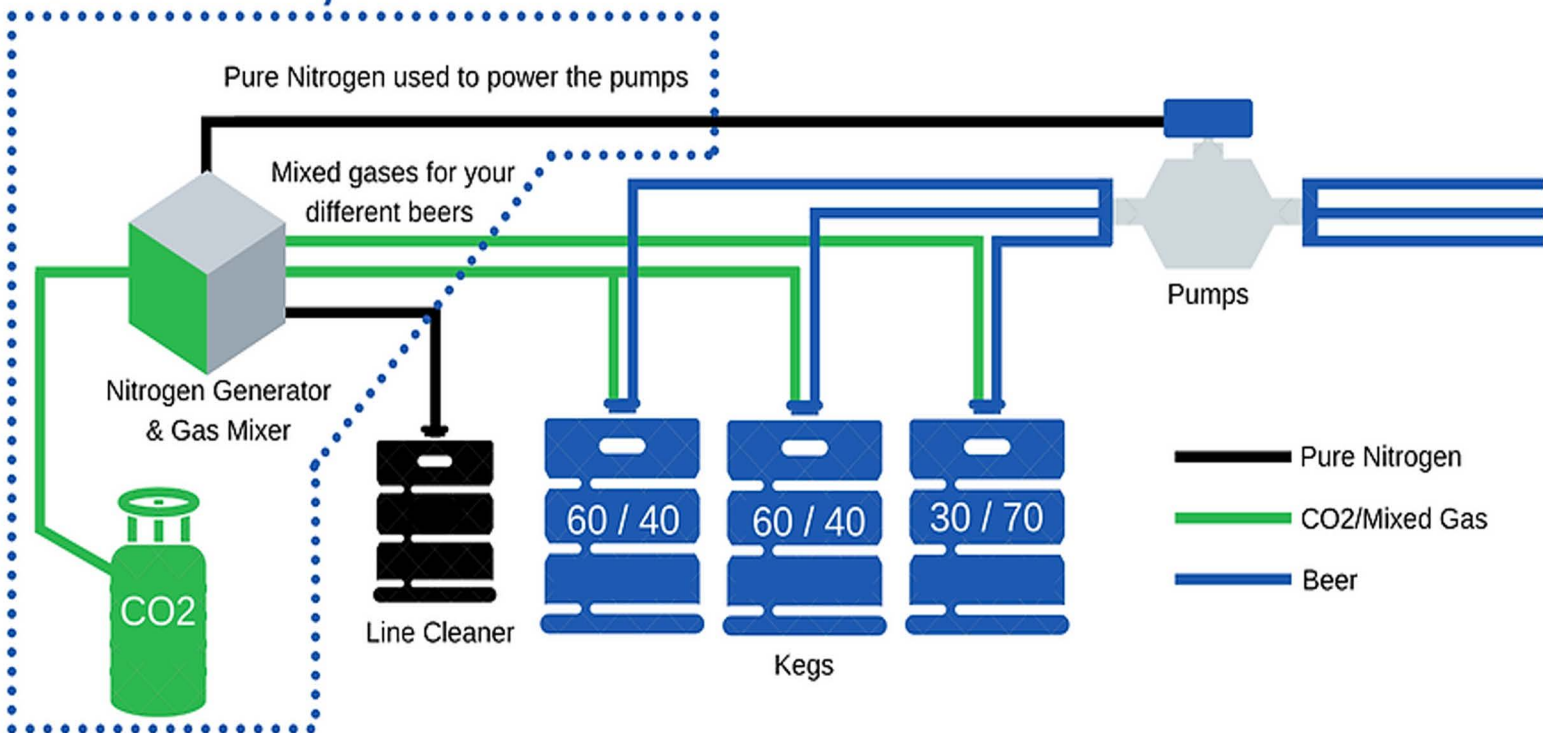

Using less CO2 makes your bottled gas last longer. Allowing you to reducing the number of bottles in your cellar, this saves rental costs and improves safety in the cellar. Fewer bottles have to be moved around and fewer high-pressure bottles presents less of a risk to both staff and customers.

How It Works

While CO₂ is required for the taste and texture of several beers and necessary for the mixed gas in your system, it is no longer essential to power your beer pumps or for cleaning your lines, Apex's NitroN₂ instead generates nitrogen for these tasks, saving you the need for bottled gas and cutting down on your rental costs.

Total Cellar System

This system is perfect for all sizes of premises, that want a cheaper, environmentally friendly cellar system which provides the quality draft, they and their customers are use too.

We are constantly working to improve our system and develop new technologies to better our product delivery.

If you choose to take out a subscription package with us then all new developments we make come included.

Our Best Allows You To Do Yours
